ICANN Update

Save Vocea

Vice President, Stakeholder Engagement - Oceania

Presented at PacNOG22, Honiara, SB.

25 June 2018

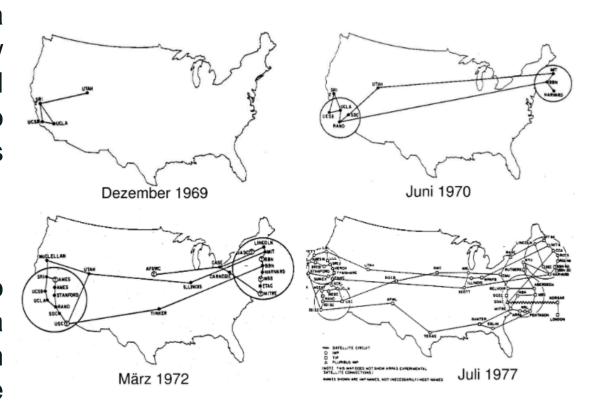

The Beginning...

 The Internet started as a research project to allow computers in universities and research institutions to connect and share resources (ARPANET)

As the network continued to grow, the need for a distributed naming system became apparent => the Domain Name System (DNS)

ICANN History Project

The ICANN History Project explores the key events in ICANN's growth, from its birth to its current day status.

This project seeks to preserve the organization's institutional memory by capturing stories from key figures who helped shape ICANN's past and present.

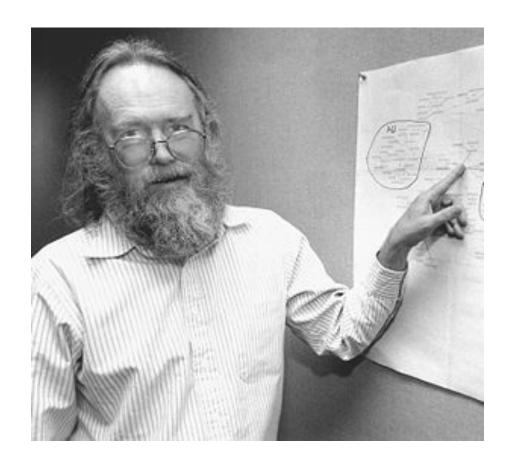

On the History Project pages you will find documents, pictures and videos that helped frame ICANN's history, and an interactive timeline presenting the chronology of significant events.

https://www.icann.org/history

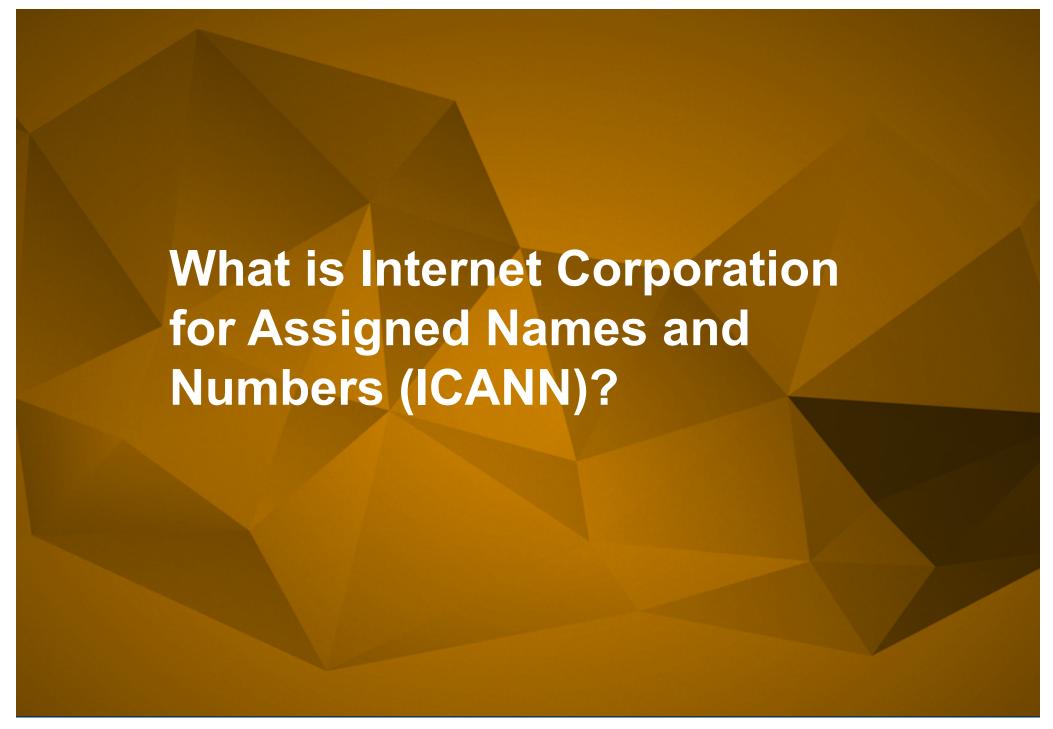

The pre-ICANN Era

Jon Postel at the Information Sciences Institute (ISI), University of Southern California (USC)

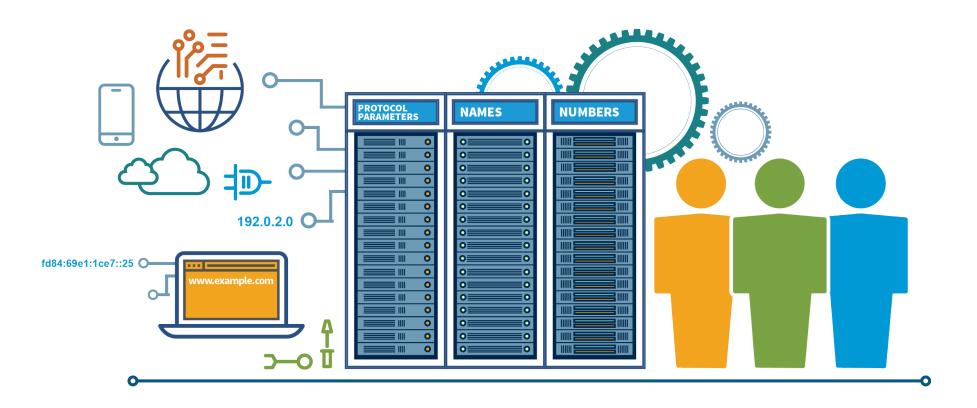

Overview

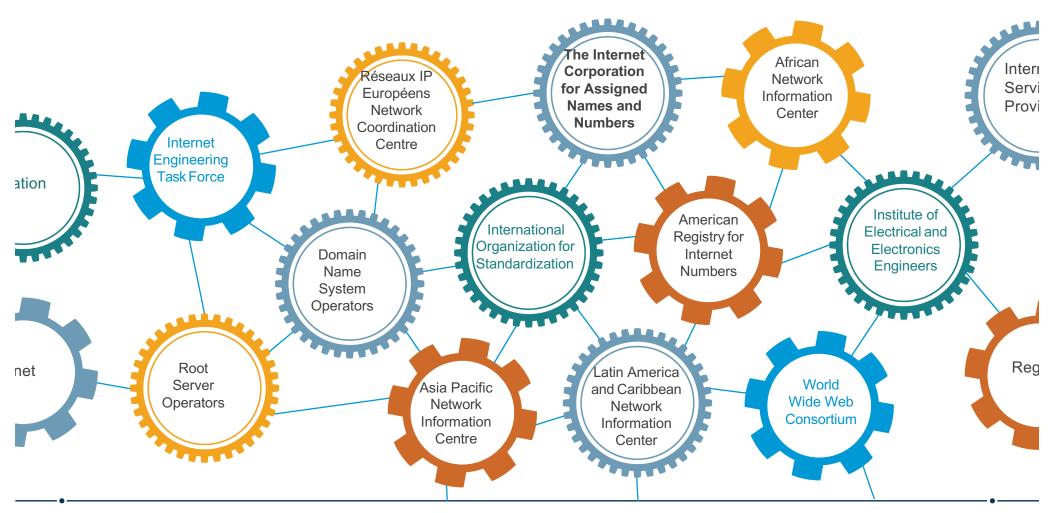

Coordinating with our partners, we help make the Internet work.

Our Technical Partners

Coordinating with our technical partners, we help make the Internet work.

Our Other Partners

We all work together in different ways to help make the Internet work.

ICANN Ecosystem

Some of What ICANN Organization Does

Domain Name System

The domain name system provides addressing for the Internet so people can find websites, send email, and other tasks. The ICANN organization also supports the stability of the DNS through its work, and also its contracts and accreditations.

Policy Development

The ICANN organization supports inclusive, open and transparent multistakeholder bottom-up consensus based policy development mechanisms.

L-Root

The ICANN organization hosts and supports one of the 13 L-Root infrastructures. At over 160 locations worldwide, L-Root is critical to infrastructure that helps reduce latency and improves performance of the DNS.

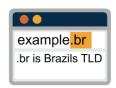

Support and Grow the Community

The ICANN organization engages, nurtures and supports interested stakeholders for active and meaningful participation in ICANN. ICANN connects with stakeholders through outreach and engagement, and meeting & event support.

Generic Top-Level Domains

The ICANN organization manages the domain name system's top-level domains. ICANN helps promotes competition and choice in the gTLD marketplace.

Country Code Top-Level Domains

The ICANN organization delegates top-level domains identified with a country code. Management is done by national ccTLD operators.

Protocol Parameters

The ICANN organization, in coordination with the Internet Engineering Task Force, manages protocol parameters by maintaining many of the codes and numbers used in Internet protocols.

Internet Protocol Addresses

By serving as the central repository for IP addresses, the ICANN organization helps coordinate how IP addresses are supplied – preventing repetition and conflicts.

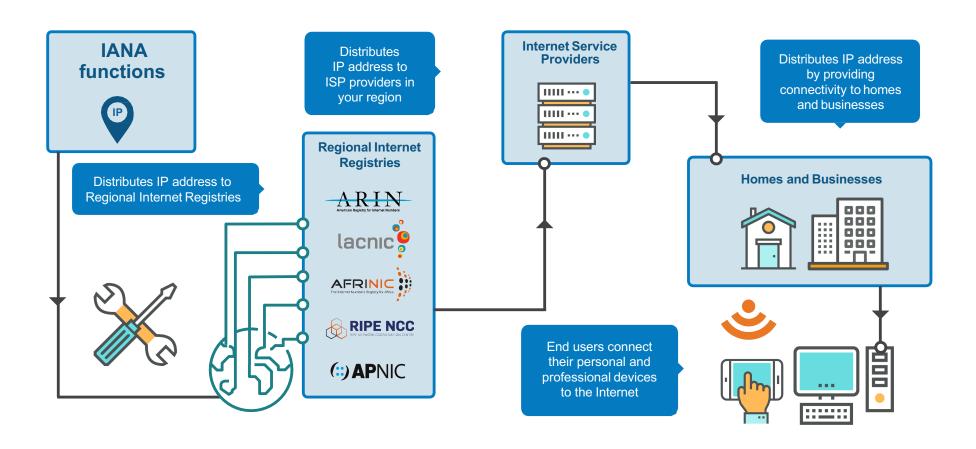

Root Zone Management

The ICANN organization helps manage the root zone through the IANA functions, which involves assigning the operators of top-level domains, such as .bank and .com, and maintaining the technical and administrative details.

IANA functions

How Internet Protocol (IP) Addresses are Distributed

ICANN's Global Presence

Call one of our regional offices or submit a question online

Contact us ▶

Regional Offices:

Los Angeles, U.S.A (Headquarters) Brussels, Belgium Istanbul, Turkey Montevideo, Uruguay Singapore

Engagement Centers:

Beijing, China Geneva, Switzerland Nairobi, Kenya Washington, D.C., U.S.A.

Partnership Centers:

Asunción, Paraguay Cairo, Egypt Seoul, Republic of Korea

The ICANN Multistakeholder Community

ICANN follows a bottom-up, multistakeholder model in which individuals, non-commercial stakeholder groups, industry, and governments play important roles in its community-based, consensusdriven, policymaking approach.

https://www.icann.org/community

The ICANN Multistakeholder Community

MAKING POLICY:

Three Supporting
Organizations (SOs) in
the ICANN community are
responsible for developing
policy recommendations in
the areas they represent:
IP addresses; generic toplevel domains (gTLDs);
and country code top-level
domains (ccTLDs).

auro **

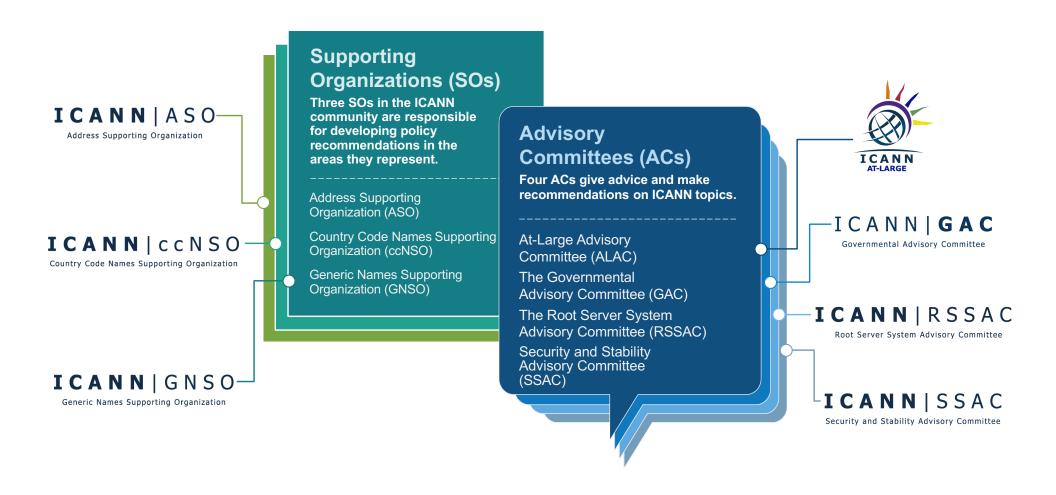

PROVIDING ADVICE:

Four Advisory Committees (ACs) give advice and make recommendations on ICANN topics. The ACs are made up of representatives from: governments and international treaty organizations; root server operators; Internet security experts; and Internet end users.

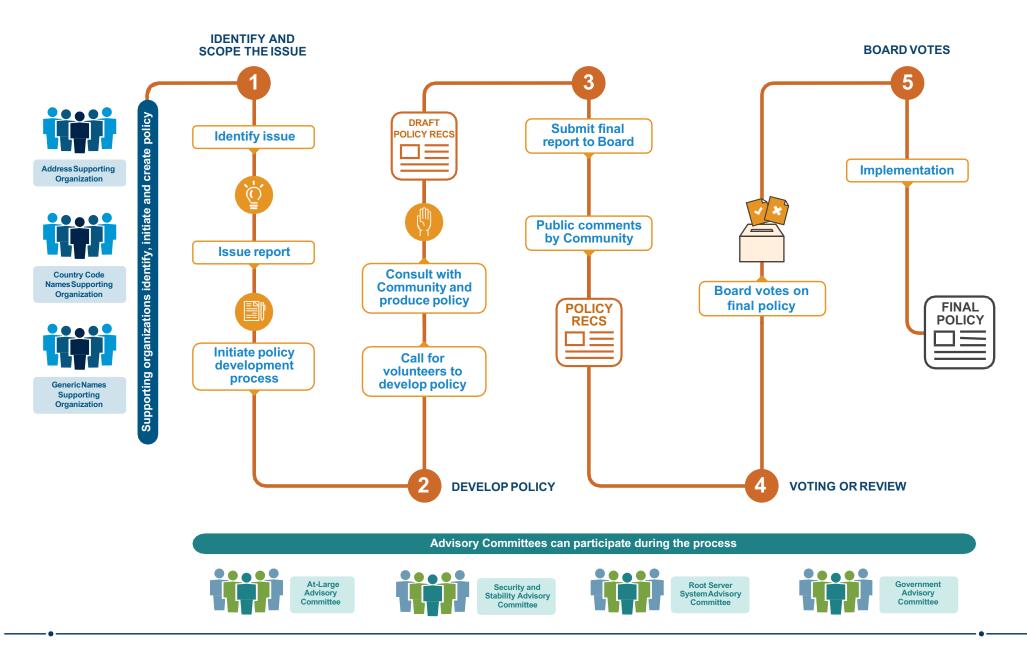

Exploring ICANN's Multistakeholder Community

How Does the Community Develop Policy?

Get Involved and Informed

Attend an ICANN Public Meeting. Three times a year, ICANN holds free and open public meetings in different regions around the world. Visit **meetings.icann.org** to learn more.

Visit **go.icann.org/journey** to learn how you can attend an ICANN Public Meeting as part of the NextGen@ICANN or ICANN Fellowship programs.

Take a free online course at learn.icann.org.

Attend events in your region.

Find and participate in an ICANN community group by visiting **icann.org/community**.

Sign up for ICANN news alerts and regional newsletters.

Programs Available

Fellowship

Global Capacity Building Program to support ICANN's Multistakeholder community; online application process 3x year around an ICANN Meeting (1 Mtg for Alumni only)

NextGen

Regionally based Program to create awareness and promote future discussions within universities and other regional forums; online application process 3x a year around an ICANN Meeting

Newcomer

Those just entering the ICANN community can self-educate using the Newcomer webpage or participate in person or remotely at the ICANN Meeting Newcomer Sunday

ICANN Learn

ICANN | LEARN

- ICANN Learn presents education and training, across a wide variety of topics that pertain to ICANN, to better educate stakeholders in the ICANN ecosystem.
- It is an online platform that is free to access and free to create course content to share with fellow ICANN community members.
- ICANN Learn is currently available in the six UN languages.

ICANN Meetings Overviews

Three times a year, ICANN holds free and open public meetings in different regions around the world.

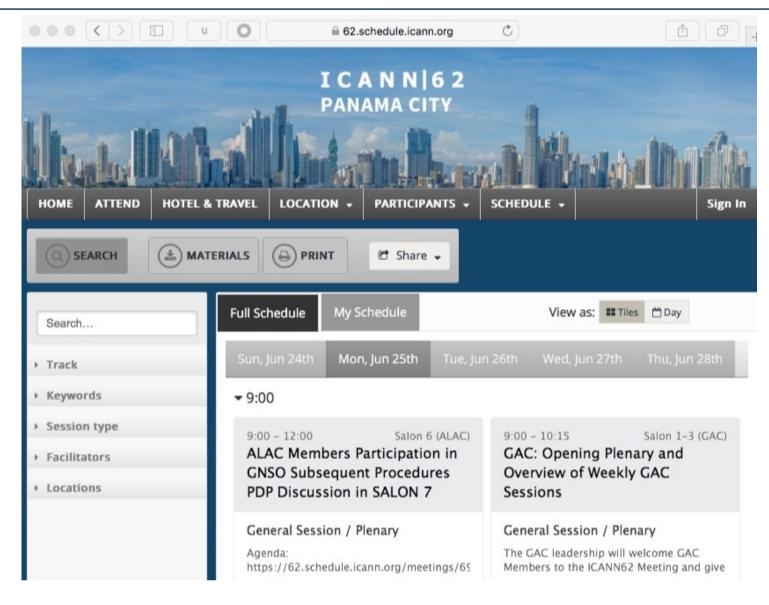

ICANN Public Meetings provide the opportunity for an internationally diverse group of individuals and organizations to come together to discuss and develop policies for the Internet's naming systems.

ICANN's international meetings have been a staple of ICANN's multistakeholder bottom-up consensus-building model since its formation in 1998.

Parts of a Domain Name?

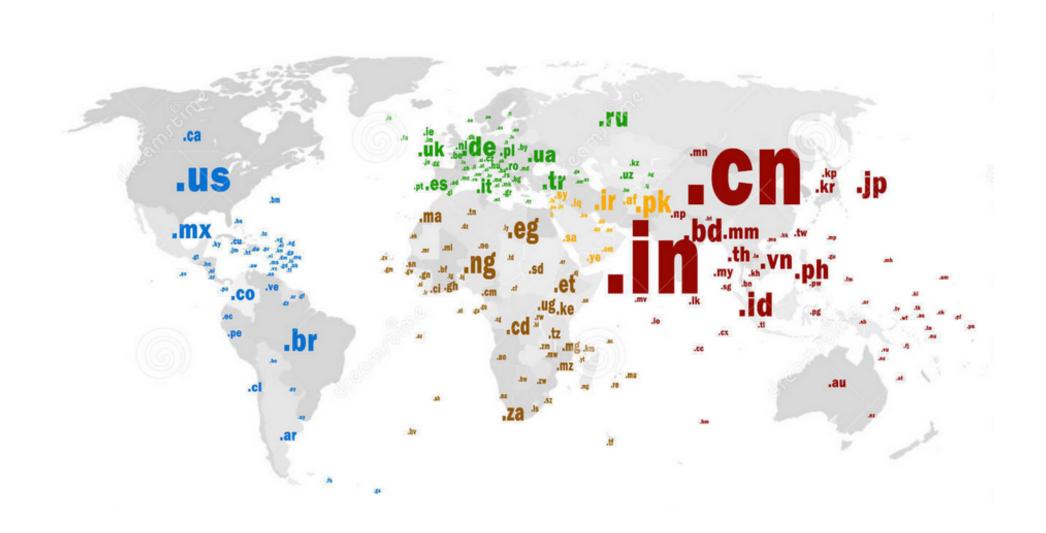

Top Level Domains (TLDs)

- Exists at the highest level of the DNS hierarchy
- It is the entry installed into the root-zone
- Consists of various groups:
 - ccTLDs (.sb, .tv, .fm, .to, .fj, .ki)
 - gTLDs
 - Sponsored (.asia, .cat)
 - Unsponsored (.com, .net, .org)
 - New (.apps, .shop, موقع .)
 - IDN TLDs (ن ابوظبي ,. بازار ,.عمان) .)

Country Code TLDs (ccTLD)

Source at http://dreamstime.com/

Where do ccTLDs get Their Code From?

- The ISO-3166 provides 2-letter codes and 3-letter codes of countries or a grouping of countries
- 249 assigned 2-letter codes
 - According to the UN, the world has 196 countries
- More at https://www.iso.org/obp/ui/#search

What are IDNs?

An Internationalized Domain Name (IDN) uses a particular encoding and format to allow a wider range of scripts to represent domain names.

Until late 2009, Top-Level Domains were restricted to only the Latin letters a to z without accents or symbols. After 2009, IDN TLDs were introduced in other scripts including Arabic, Chinese and Cyrillic scripts.

IDN TLDs can be either ccTLDs or gTLDs.

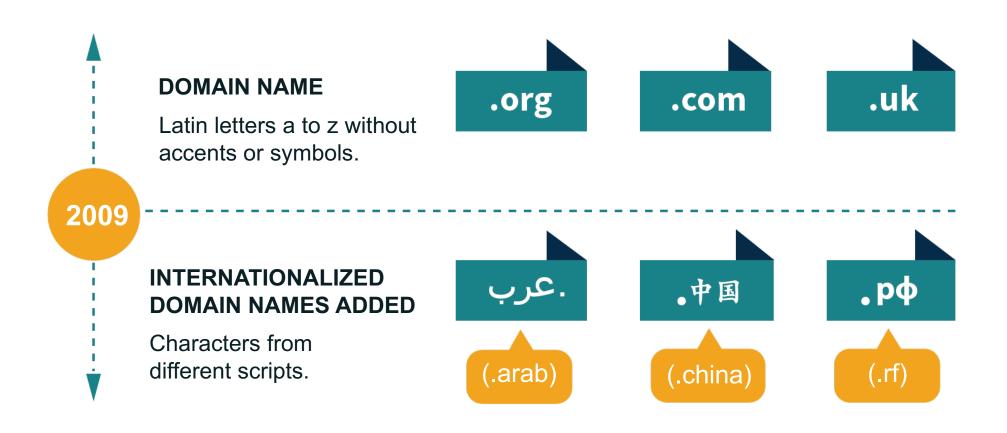

Internationalized Domain Names

Domain names with non-Latin characters or Latin characters beyond letters (a to z) digits (0 to 9) and hyphen (-), as allowed by relevant protocols.

What has changed with Top-Level Domains?

Why Internationalize Domain Names?

Number of Internet Users Worldwide*

More and more people around the world, once unconnected, are online.

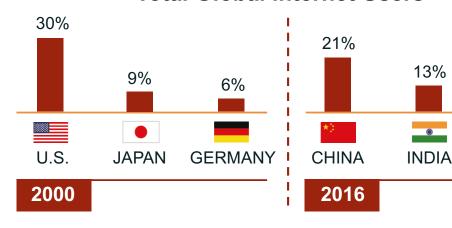

2020

5B expectedMore language communities join

IDNs allow people around the world to access domain names in their local languages.

Top Three Countries by % of Total Global Internet Users*

What is the New gTLD Program?

The goal of the New gTLD Program is to foster competition, innovation and choice in the domain name industry.

- This is an Internet community-driven initiative that is enabling the largest expansion of the domain name system, ever.
- The New gTLD Program is managed by ICANN, which means it has taken shape through the multistakeholder model.
- Over 1,200 new generic top-level domains have now been introduced into the Internet over the next few years.

What is the New gTLD Program?

Registry/Registrar/Registrant

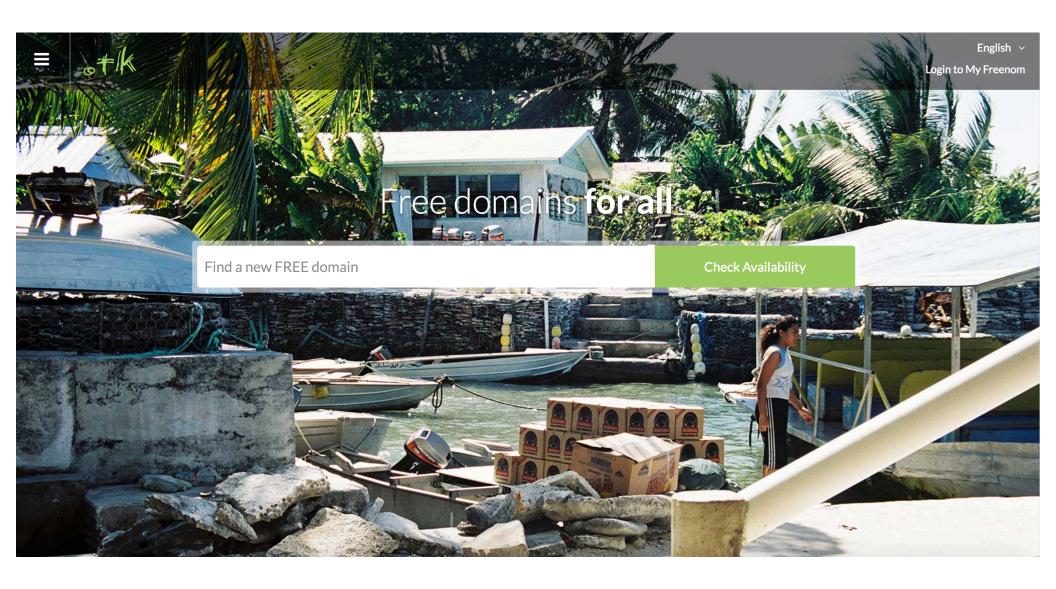

- Registry The entity that operates a TLD
- Registrar A middle-agent that sells domain names to registrants on behalf of a TLD Registry
 - ICANN Accredited Registrar vs. Resellers
 - ccTLDs vs. gTLDs
- Registrant Entity registering a domain name

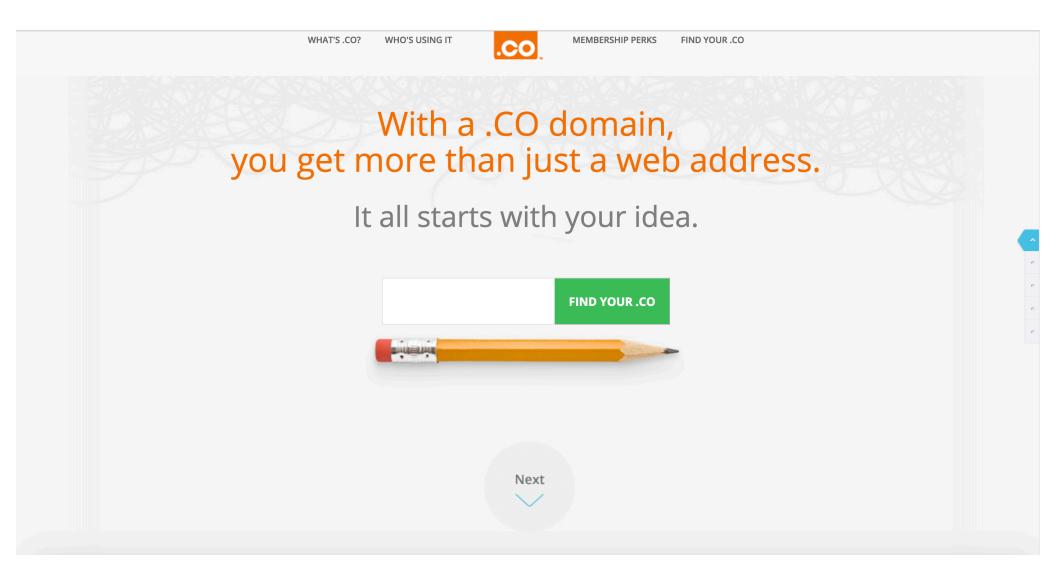

Levels of Entrepreneurship in the DNS Industry

- Entrepreneurship at the ccTLD Level
- + Entrepreneurship at the gTLD Level
- + Entrepreneurship at the Registry Level
- + Entrepreneurship at the Registrar Level
- Entrepreneurship at the Domain Name Level

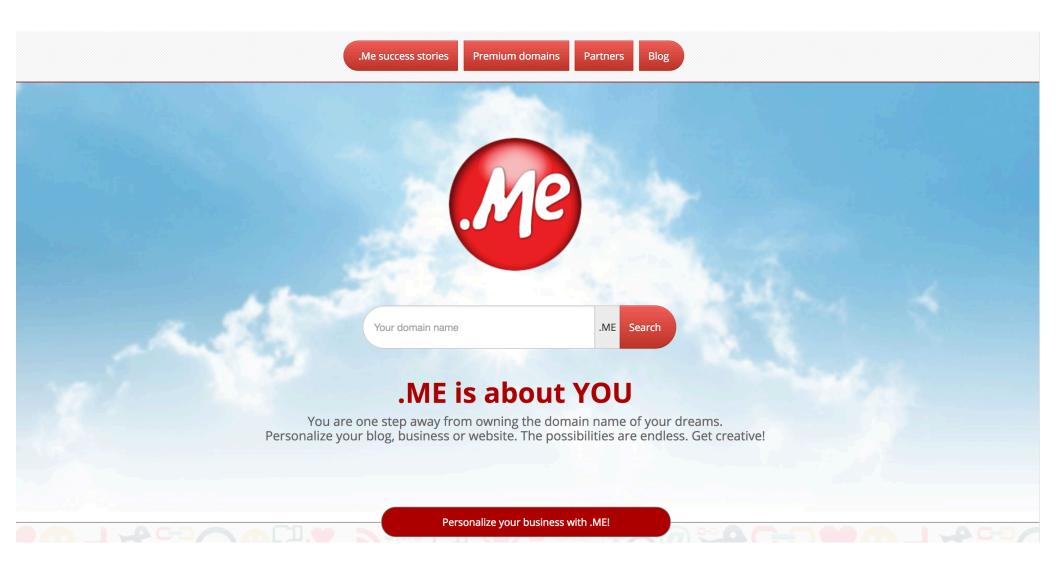

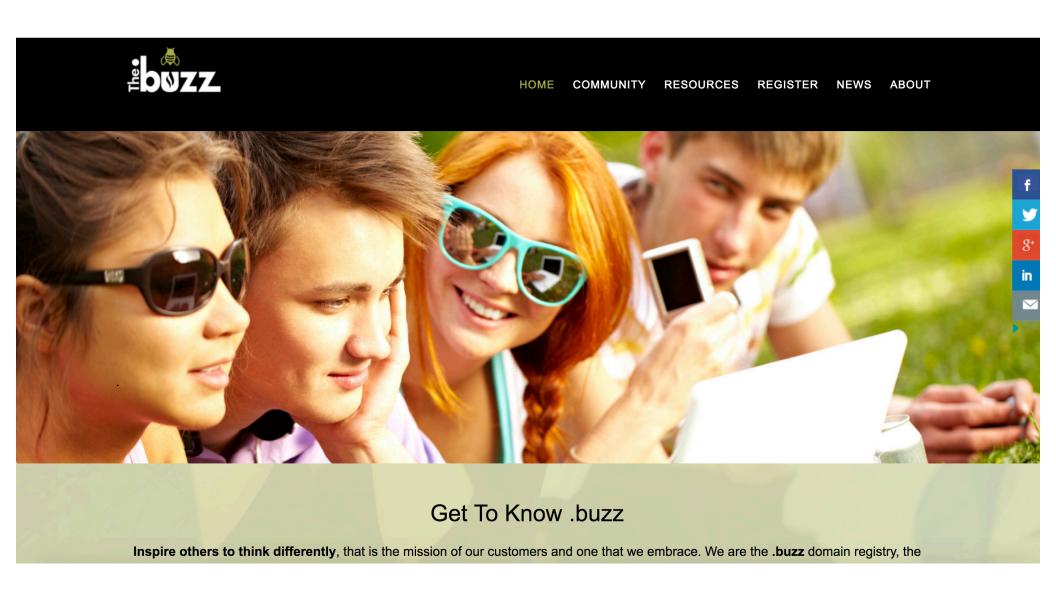

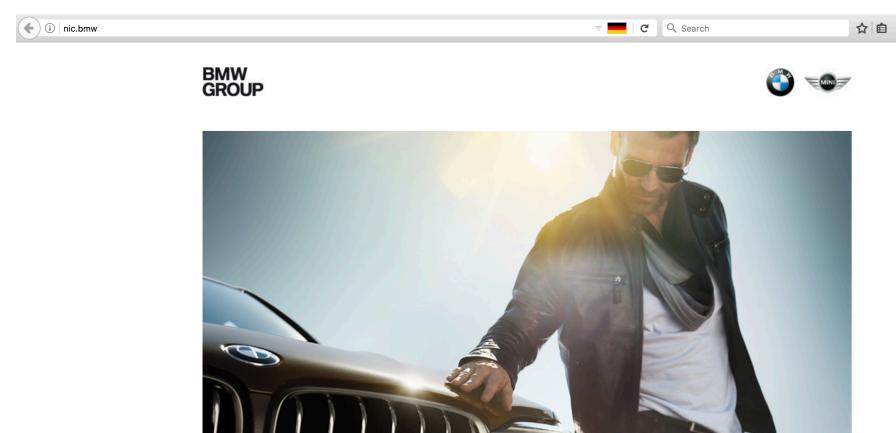

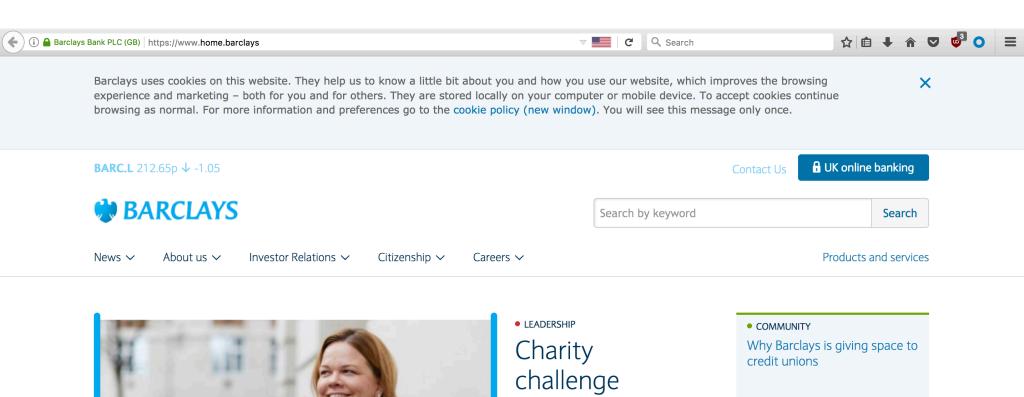

Registry Operator Website for the .BMW Top-Level Domain

This is the official Registry Website of the .BMW top-level domain name. Bayerische Motoren Werke AG is the ICANN approved registry operator of the .BMW top-level domain.

Engage at ICANN

Do you want to be in the vanguard of

Do you want to shape open standards development and new technology?

Do you already devote resources to lobbying about Internet policy at the global level?

Do you already devote resources to lobbying about Internet policy at the national level?

Internet expansion

into new markets?

Do you want to shape policy at the global level and know what is on the horizon?

Do you know if your competitors are already participating?

?)

Do you want to be part of a growing and active community?

Do you see the Internet as a global shared resource worth supporting?

Do you want to defend the multistakeholder model?

Engage with ICANN
